

Nominal For Energy & Agriculture

Finance teams in agriculture and energy face unique challenges: seasonal operations, joint ventures, complex consolidations, and strict compliance requirements. Legacy ERPs aren't designed for this level of accounting complexity, leaving teams buried in spreadsheets.

Nominal overlays your existing systems to automate the work that slows you down, so you can close faster, ensure compliance, and focus on strategy.

The Problem

Legacy ERPs weren't designed for today's accounting demands in agriculture and energy. Teams are left stitching together reports in Excel, struggling with:

- Complex intercompany transactions across diverse agricultural and energy sector organizations
- Inventory mismatches from agricultural products, energy resources, and operational equipment
- Period-end variance explanations across commodities, projects, and seasons
- Consolidated reporting across entities and currencies

And doing it all manually.

The Solution

Nominal works with ERPs such as **SAP S/4HANA, Oracle NetSuite, Microsoft Dynamics 365, Sage X3, and Infor/IFS** to automate the most time-consuming parts of your close.

AI agents run continuously across entities, commodities, and workflows, delivering consolidated, audit-ready financials without ERP migrations or heavy consulting projects.

What Nominal Automates

Workflow	How Nominal Helps
Journal Entries	Automates recurring entries like accruals, allocations, and reclasses directly in your GL.
Transaction Matching	Auto-matches AR/AP, inventory, and intercompany trades: ideal for commodity sales or energy field tickets.
Variance Analysis	Surfaces and narrates P&L and balance sheet variances in plain language.

Multi-Entity Consolidation	Eliminates IC balances and automates roll-ups across subsidiaries, currencies, and accounting bases.
Policy Enforcement	Flags anomalies, logs approvals, and maintains built-in documentation for compliance.
Close Progress Dashboard	Tracks status across reconciliations, journal entries, and reporting with no manual chasing.

Consolidating financials across our solar project entities used to be a spreadsheet nightmare. Nominal automated eliminations and consolidated everything with a click, saving us countless hours and keeping our books audit-ready.

Case in Point

Green Street Power Partners (GSPP)

Green Street Power Partners (GSPP), a national solar energy developer with 280+ entities, struggled with consolidations, compliance, and a month-end close run on Excel. Preparing timely financials was slow, stressful, and error-prone.

Nominal connected seamlessly, automated intercompany eliminations, handled ASC 842 lease compliance, and streamlined close management.

Results:

- Automated consolidations across 280+ entities
- Managed 200+ transactions per month
- Ensured ASC 842 lease compliance for 115+ leases
- Saved 60+ hours per month on financial processes
- Delivered real-time financial visibility for executives

Designed for Finance Teams in Agriculture & Energy

Nominal is built for organizations that:

Operate with complex multi-entity structures

Face seasonal volatility or joint venture accounting

Manage strict compliance and audit requirements

Need faster, more accurate closes without ERP overhauls

Whether reconciling corn sales across co-ops or resolving JV balances in energy projects, Nominal automates the manual heavy lifting so your finance team doesn't have to.
