Experience

Website Developer/Designer

April 2024 - Present

DarLabs — Jupiter, Florida

- Redesigned 10+ pages in Figma to match updated branding guidelines, coordinating closely with a developer to ensure accurate implementation
- Built interactive Google Maps practitioner locator feature by leveraging AI prompt engineering to develop custom PHP code snippets, enabling users to search and filter healthcare providers by geographic location
- Configured LearnDash LMS, editing and structuring 7 video course modules with organized curriculum framework

Digital Marketing Specialist

March 2020 – Present

MadeByDianna — Jupiter, Florida

- Developing a comprehensive social media strategy in that aligns with the client's target audience
- Managed content calendars and marketing roadmaps in an Agile environment using Jira and Notion
- Grown a 26k following on TikTok and amassed 1 million likes through organic reach from a zero following

Online eCommerce Intern

June – August 2023

Estee Lauder Companies — New York, New York

- Ticketed bugs for quality assurance and communicating directly with developers using Jira
- Designed high-fidelity mockups for mobile and desktop versions using Figma
- Highlighted user behavior analytics to identify and redesign underperforming website components, enhancing visibility and engagement

Related Projects

Habit Tracker Application (HabitTrack.Netlify.app)

January – May 2024

- Built full-stack web application using React.JS, HTML/CSS, and Supabase REST API for backend services
- Integrated Supabase Authentication with Google OAuth for secure sign-in and implemented database CRUD operations via REST API calls
- Monitored usage of 15+ active users, debugging issues and optimizing performance based on user feedback
- Architected modular design system with 10+ reusable React components for feature development and maintainability

Nurse Management System

October – December 2023

- Optimized 6 JFrames and 10 JPanels in Java, enhancing GUI performance and user experience
- Collaborated with a team of 4 developers to integrate front and back-end components, contributing to the deployment of 4+ core features
